

THREE DECADES OF LOSS
PREVENTION EXPERTISE.
DATA-DRIVEN INNOVATIONS
FOR THE FUTURE.

DRIVING INNOVATION, DELIVERING SEAMLESS SOLUTIONS

Let's face it. The way you assessed property risk in the past just won't work for the insurance climate of tomorrow. You need a loss prevention strategy that fuses innovative data-driven technologies with deep expertise in inspection best practices.

Enter JMI Reports. We have roots in traditional boots-on-the-ground inspections, but today we're at the forefront of deploying technology that goes far beyond what any inspector with a clipboard can do. After 35 years in business, we are a trusted source of reliable and thorough property data for insurance carriers, MGAs and underwriters of all sizes. Our solutions are deployed for assessing risk in millions of residential, commercial and agribusiness properties nationwide. We make the invisible visible.

OUR TECHNOLOGIES

BlueSkyVUE™ is a fully mobile loss control software platform that offers carriers an unparalleled chance to harness and seamlessly integrate various data sources to paint a full picture of a property's risk. Create a workflow that takes you through data assessment, quality assurance, report generation and action planning in a single dashboard.

QuickVUE™

QuickVUE™ is a DIY inspection technology that puts the power in the hands of your policyholders to provide the critical property data you need to make good underwriting decisions. QuickVUE walks them through a simple, efficient, and intuitive process to provide such information as roof age, property characteristics, photography and more, with no downloads required.

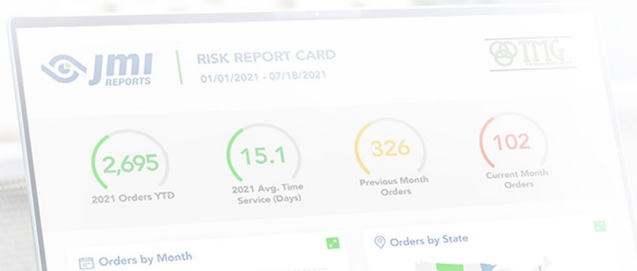

A TOTAL SOLUTION FOR ASSESSING PROPERTY RISK, ALL FROM A SINGLE PLATFORM

Aerial Imagery

Aerial imagery is a critical piece of the puzzle in creating a total picture of a property. JMI Reports fuses aerial imagery with other key data points to reveal the red flags that other assessment tools can't.

AI/Data Analytics

The amount of data available from dozens of sources can be overwhelming. We don't just give you more data, we give you precise, actionable data.

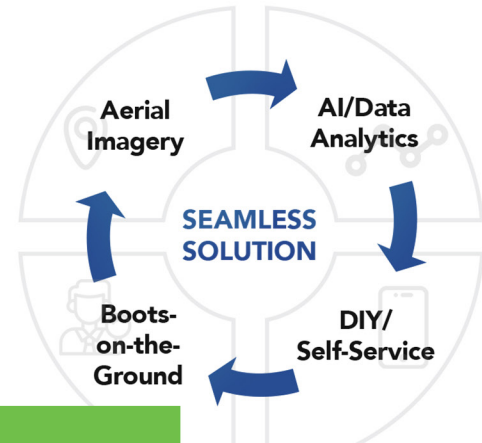

DIY/Self-Service

Your policyholders can be valuable partners in providing the data you need for good underwriting decisions. Our QuickVUE™ tool allows a property owner to complete a simple and quick DIY inspection directly from their mobile device.

Boots-on-the-Ground

The need for and value of traditional boots-on-the-ground inspections will never be obsolete. It still serves as the best tool for understanding a property's risk profile. JMI Reports has an army of inspectors nationwide equipped to do in-person assessments to fill in data gaps.

THE TIME IS NOW TO THINK DIFFERENTLY ABOUT YOUR RISK PREVENTION STRATEGIES

The insurance industry is **facing unprecedented challenges on many fronts**, with more on the horizon. Insurers can't afford to be idle, relying on the same old strategies from the industry of the past. Let JMI Reports help you sort through the many options available and find the ones that fit best with your unique needs, with a total solution to prepare you for the industry of tomorrow.

Residential | Commercial | Agribusiness
